

## PRIMARY RATE INTERFACE (PRI)

PRI is a scalable, cost-effective, digital voice solution designed to help your business stay connected and make the most of your existing communication systems.

## Shentel Fiber Services: PRI Voice

### ULTRA RELIABLE

PRI is a digital circuit which uses our state-of-the-art fiber optic network and redundant switching infrastructure to deliver reliable, digital voice services.

### UNMATCHED CLARITY

Voice communications are much clearer with a PRI system's digital end-to-end connection, helping eliminate unwanted noise typically experienced in analog solutions.

### SCALABILITY

With a standard of 23 B channels for voice and a D channel for routing and controlling the information, you can easily scale your capacity to meet your communications needs. We provide services in single PRI increments and can provision additional capacity quickly and efficiently.

Headquartered in  
Edinburg, VA, Shentel  
was built to serve rural  
customers with the same  
world class services  
available anywhere. Our  
advance fiber network  
is built to ensure you  
keep pace with the  
ever-changing demands  
of our networked world.  
We look forward to  
partnering with you.

## WHY SHOULD I USE A PRI (PRIMARY RATE INTERFACE)?

The PRI is the current standard for delivering voice service to a traditional PBX. We can help you make the most of your communications system with PRI services delivered over our state-of-the art fiber optic network.

PRI service delivers digital voice to multiple end-users over a single interface.

Each PRI has the capability for 23 simultaneous voice connections as well as a data channel for call routing and signaling.

With its expanded features, standard interface and reliability, the PRI solution allows you to provide professional service at very little incremental cost.
